OBJECTIVE

Software Engineering student with specialized training in AI/ML. Passionate about bridging the gap between theoretical research and scalable software systems. Committed to building efficient, intelligent applications through LLMs and deep learning, backed by strong foundations in competitive programming

EDUCATION

The University of Lahore

Bachelor of Science in Software Engineering, GPA: 3.02

Lahore, Pakistan

2023 – 2027

- Coursework: Data Structures, ML, Software Engineering, Database, OS

EXPERIENCE

AI/ML Engineering Intern | DevelopersHub Corporation | March 2026 – April 2026

Completed a 6-week AI/ML internship at DevelopersHub Corporation, developing Heart Disease and Crop Recommendation systems using PyTorch and LLaMA 2. Executed high-impact Deep Learning and LLM tasks, earning the "Best Award" and Certificate DHC-2697 for exceptional performance.

SKILLS

Languages: C++, Python, JavaScript, HTML, CSS, SQL

ML/AI Tools: Deep Learning, NLP, Computer Vision, Data Science, Gen AI Model Quantization

Development Tools: Git, GitHub, VS Code, Jupyter, Google Colab, SQLite, SQL,

Soft Skills: Team Collaboration, Problem Solving, Research, Leadership, Communication, Project Management

PROJECTS

Petrol Pump Management System | *Database, MySQL, Php, HTML, CSS*

A web-based application designed to automate and streamline petrol pump operations.

It manages fuel inventory, tracks daily sales, handles employee shifts, and generates comprehensive reports for efficient and transparent management.

Pharmacy Management System | *OOP, C++, File Handling*

An object-oriented program designed to manage a pharmacy's inventory.

It uses classes for Medicine, Supplier, and Stock to track drug details, manage supplier information, handle sales, and automatically alert staff about low-stock items or approaching expiry dates

Crop Recommendation | *Python, PyTorch, QLoRA, LLaMA 2*

A data-driven system that recommends the most suitable crops to grow from 22 different types.

It analyzes environmental factors like soil nutrients (N, P, K), temperature, humidity, and rainfall to make predictions. The project compares models like KNN and Decision Trees, finding that KNN provides the highest accuracy for this task

Heart Disease Prediction | *Python, Scikit-Learn, Pandas, NumPy*

Developed a machine learning-based diagnostic tool to predict heart disease risk by analyzing clinical indicators such as cholesterol and blood pressure through extensive EDA and data normalization. I evaluated classification algorithms, including Logistic Regression and Random Forest, to ensure high prediction reliability for medical data. This project was completed as a key technical task during my AI/ML Engineering Internship at DevelopersHub Corporation, contributing to my receipt of the Best Award for exceptional performance.

CERTIFICATIONS

Certificate of Achievement in AI/ML Engineering, DevelopersHub Corporation (DHC-2697), April 2026.
