OBJECTIVE

Software Engineering student with specialized training in AI/ML. Passionate about bridging the gap between theoretical research and scalable software systems. Committed to building efficient, intelligent applications through LLMs and deep learning, backed by strong foundations in competitive programming.

EDUCATION

The University of Lahore	Lahore, Pakistan
<i>Bachelor of Science in Software Engineering — GPA: 3.02</i>	2023 – 2027
Relevant Coursework: Data Structures, Machine Learning, Software Engineering, Database Systems, Operating Systems	

EXPERIENCE

AI/ML Engineering Intern	March 2026 – April 2026
<i>DevelopersHub Corporation</i>	<i>Lahore, Pakistan</i>
- Completed a 6-week internship developing Heart Disease and Crop Recommendation systems using PyTorch and LLaMA 2 - Executed Deep Learning and LLM tasks including model quantization with QLoRA and fine-tuning large language models - Earned the Best Award and Certificate DHC-2697 for exceptional performance among intern cohort	

PROJECTS

CaseVision — Pakistani Legal Research Platform <i>Flutter, FastAPI, Firebase, MySQL, Gemini API</i>	2026
- Building a hybrid mobile/backend platform for Pakistani legal case research as Final Year Project, combining Flutter, FastAPI, and Firebase - Implemented Firebase Authentication and Firestore data migration for user and case management - Built an FIR upload and OCR pipeline using Tesseract, Poppler, and Gemini 2.5 Flash for automated document extraction - Designing semantic case-study search using Gemini embeddings and cosine similarity over a MySQL case-study database	
Crop Recommendation System <i>Python, PyTorch, QLoRA, LLaMA 2</i>	2026
- Built a data-driven system recommending optimal crops from 22 types by analyzing soil nutrients (N, P, K), temperature, humidity, and rainfall - Benchmarked KNN, Decision Trees, and fine-tuned LLaMA 2 with QLoRA; KNN achieved the highest accuracy for this classification task	
Heart Disease Prediction <i>Python, Scikit-Learn, Pandas, NumPy</i>	2026
- Developed an ML diagnostic tool predicting heart disease risk from clinical indicators such as cholesterol and blood pressure - Conducted extensive EDA and data normalization; evaluated Logistic Regression and Random Forest classifiers for high reliability - Completed as a key internship deliverable at DevelopersHub Corporation, contributing to receipt of the Best Award	
Petrol Pump Management System <i>PHP, MySQL, HTML, CSS</i>	2025
Designed a web application automating fuel inventory, sales tracking, employee shift management, and report generation	
Pharmacy Management System <i>C++, OOP, File Handling</i>	2024
Built an object-oriented inventory system with automated low-stock and expiry alerts	

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, Dart, HTML, CSS, SQL
ML/AI Tools: Deep Learning, NLP, Computer Vision, Data Science, Generative AI, Model Quantization, LangChain, ChromaDB, HuggingFace
Frameworks: Flutter, FastAPI, Firebase
Development Tools: Git, GitHub, VS Code, Jupyter, Google Colab, SQLite, MySQL
Soft Skills: Team Collaboration, Problem Solving, Research, Leadership, Communication, Project Management

CERTIFICATIONS

Certificate of Achievement in AI/ML Engineering — DevelopersHub Corporation (DHC-2697)	April 2026
